

HECAT IN FLEET, TRUCK, AND BUS

HECAT is a complete source for all heat exchanger cleaning applications such as A/C Component, Transmission oil cooler, and Coolant system flushing equipment; including, special application flushing adapters and environmentally sound and effective chemical cleaners.

Proper transmission oil cooler flushing is a must to prevent premature failure and comebacks after rebuilding or installing a new Allison or other brand automatic transmission.

Ryder Transportation Services

Ryder Transportation Services uses the FAC-400 Recycling A/C Component flusher with the FAD-100 Universal Adapter Kit. These are required tools and must be in place as part of Ryder's internal A/C training and certification programs.
