

HECAT IN HEAVY EQUIPMENT

Many Heavy Equipment field service technicians have found our smaller A/C flushers to be well suited for field service of cab A/C systems, such as the ← FAC-200 or the universal use (A/C components, oil coolers, and more) of the Pulsating Flush Gun ↓

These tools are much more effective at cleaning the heat exchangers and alleviate the problems and frustrations of repeat failures, than can be accomplished with the use of ineffective aerosol can cleaners and the little 1 qt. flush guns.

Hydraulic hose and tubing cleaning up to 3/4" I.D. can be done with our Pulsating Flush Gun→. This is much more effective than the foam 'Pop' gun method and meets the MIL spec for solvent cleaning. The solvent tank holds one gallon of solvent and a five gallon capture container is included.

NEW DEVELOPMENT:

We have developed a prototype "Giant" Pulsator Flush Gun using a five gallon pressure tank, 20 gallon capture container, 5/8" flush hose, larger flowing flush gun, with a 2" diameter rubber tip. This tool is being tested on flushing larger hose and tubing assemblies and critical cleaning of some large hydrostatic drive circuits. We will post further updates as field trials of this development project proceeds.
