

## HECAT IN MOTORCYCLE SHOPS

This is an emerging market for us as we have always focused our tool development toward automotive applications.

In recent years we have developed some smaller hand held tools using our patented "Pulsating" scrubbing action that seem to be finding their home in motorcycle service shops.

The "Pulsator" Flush Gun → is a versatile solvent blasting tool powered by shop air including the hard hitting "Pulsating" action of our professional flushing carts. This tool is perfect for cleaning oil coolers, oil tanks, and degreasing frames.

The Coolant Flusher ← with its attachments for automotive heater core flushing has proven to be a great tool for Coolant System flushing of the radiator and block on the water cooled motorcycles.

A video demonstration of both the above mentioned tools can be viewed on our web site home page. "Where to buy?" information can also be found at:
