

# The HECAT "Pulsator" Mark III Transmission Oil Cooler Flusher

When technicians asked for the proven Economy flusher to be cart mounted. HECAT answered with the development of the Pulsator Mark III, featuring the same Patented (US Pat #5615695), Impacting, Air Operated, Pulsating, and Scrubbing Action.

Filtering was added to allow for the 2 gallons of solvent cleaner to be filtered while being drained so it can be installed and reused again. An easy to obtain common automotive oil filter was chosen and a Tee strainer has been added to the return line to capture larger debris. A removable return line feature allows for a cooler waste oil purge, which aids in extending the recyclable and reusable life of the flushing fluid.

- 2-gallon capacity, with filter on the drain.
- Single pass operation using only shop air.
- Activated Carbon vent filter to limit fumes.
- 39 in. high X 23 in. wide X 15.5 in. deep.
- Return line Tee strainer to capture larger debris.
- Cooler flow verification is completed during the flushing process.
- Ships by truck, boxed and skidded weight is 120 lbs.

**Includes: The HECAT BASIC Transmission Cooler & Line Adapter Kit and 2 gallons of HECAT Safe-Flush Trans.**

**Lifetime Warranty with exclusive use of HECAT Safe-Flush Trans.**
